

Piece Goods Conveyors

Benefit from one source

BK 140

Recommended for Conveyance

Conveyor System BK 140 Modular and economic

Every RBS conveyor system is unique and consists of a set of modular single elements: the BK 140 kit. A functional and customized system from the design up to the installation and start-up is provided by one responsible partner. All systems are developed and manufactured in our own workshop, including control cabinet and control system.

The BK 140 kit – flexible in every direction

Two aluminium sections represent the backbone of the system. Combined with roller and belt conveyors as well as belt curves, they meet every conveying requirement. Attachments and subsequent extensions are possible without any problems.

Conveyance and distribution in all directions

Conveyor technology is efficient if it connects functions and workplaces without taking unnecessary space. Already in the early planning stage, RBS conveyor systems are designed in view of an optimum individual space adjustment. By using bridge structures or passage elements, the required passages to the work areas are ensured.

Order picking - ergonomically and without goods accumulations

Every product shipment requires previous order picking. For fine or batch order picking, picking from shelves or flow racks, RBS offers the suitable and proper conveyor components to meet maximum performance requirements. As early as in the planning stage, the special features of the shelf manufacturers are taken into account to ensure an optimum ergonomic design.

Section for roller conveyors

Unlimited conveyance and transfer

In many cases, the conveyor system has to be operated across several rooms. If fire walls are required, the fire shutter will be integrated in the system. RBS connects conveyor lines over several levels by using lift stations, which are part of its standard program.

More than conveyor technology

RBS offers customized system solutions around the conveyance of goods, such as ergonomic work tables, automatic strapping or gluing machines, integrated handling units or container stacking and destacking facilities. With our “Carefree Package“, you are on the safe side.

Precise – Quick sorting and distribution

An advanced distribution technology with transfer modules, tailored to the specific goods, guarantee high throughputs and increase efficiency.

Located at the Centre of Europe...

... RBS has its headquarters in Gelnhausen near Frankfurt/Main. This is where the conveyor systems are developed, designed and manufactured meeting highest quality standards. Extensive production shops and a state-of-the-art manufacturing process are the basis for an economic production.

In close contact with our customers, we develop customized systems solutions for the optimum in-company material flow from pallet conveyors over ceiling conveyors up to piece goods transport.

Full service for utmost customer satisfaction

As a family-run company, we have committed ourselves to solidity, continuity and a comprehensive customer service since 1973.

For quality reasons, the installation and start-up of the systems will be carried out almost exclusively by our own personnel.

Our competent and reliable staff is also available for the subsequent maintenance and potential modifications.

This is how we ensure that you will be satisfied with our service in the long term.
